### NOTES:

*Known Sphere Of Operation:* Empire-wide use

*Data Reliability:* a

*Major Data Source:* Klingon Sector Intelligence

The *D-7R*, named 'Bringer Of Agony' after the Klingon *K'trika*, was another attempt by the Klingons to make use of the plasma weapons, this time incorporated into the improved *D-7M* hull with the photon torpedo bays removed. The RPL-1 was placed in the bow of the ship and an additional KD-8 disrupter was placed in the aft compartment. In addition to these changes, a KCC cloaking device was added. The Klingons had learned by this time that the plasma weapon and cloak were designed to be used together, often by remaining cloaked and stationary in the path of their adversary before decloaking and firing the plasma bolt at minimum range.

Of the 32 *D-7R*'s built, 29 remain in active service, 2 have been destroyed, and 1 has been captured by Star Fleet.
