The *Rightful Heir* arrived in the IKS shortly after it's establishment and required significant repair to her impulse drive. After several weeks of work, it was determined that replacing the damaged KIC would be simpler. The IKS was able to purchase an OID-2 and within three months it was installed. Additional superstructure and an enlargement of the cargo hold rounded out the *Rightful Heir's* improvements. The ship would remain on duty until the early half of 2279.

In a startling move, the *Rightful Heir* was refit with an Orion OSM shield. This extremely efficient shield system gave the vessel excellent energy reserves during battle.

The third variant of the *Rightful Heir* installed of two Romulan RP-6s. The Romulan torpedoes could be dual installed in the existing torpedo space and would give the *Rightful Heir* a significant increase in it's attack capability.

Despite it capability, the *Rightful Heir* was eventually scrapped after engaging Federation forces in 2308.
